Chennai, India | Open to relocate to Bengaluru

SUMMARY

Final-year B.Tech CSE (AI) student with experience building API-backed prototypes, a React operations dashboard, and database workflows. Strongest in C++; developing Python skills through FastAPI projects. Seeking software engineering and AI engineering internships.

TECHNICAL SKILLS

Languages: C++, Java, SQL, Python (foundational), JavaScript, TypeScript

Frameworks and tools: FastAPI, React, React Native, Streamlit, Node.js, Git, GitHub

Databases and concepts: SQLite, PostgreSQL, MySQL, REST APIs, data structures and algorithms, OOP, machine learning and NLP fundamentals

PROJECTS

AeroOps AI – Airline Disruption Recovery Workbench *GitHub / FastAPI, React, TypeScript, SQLite*

- Built a local operator dashboard and API for inspecting affected synthetic bookings, generating recovery options, and reviewing reasons for eligible and ineligible flights.
- Implemented deterministic ranking with cabin, whole-party seat capacity, and accessibility checks; linked explanations to fictional policy citations.
- Added operator approval/rejection, synthetic seat holds, unsent notification previews, and an append-only audit trail. Approval checks for capacity conflicts and idempotent replays.
- Used public historical schedule data as a foundation for the fictional scenario. Verified the local workflow with 185 passing backend tests, a frontend build, and a browser walkthrough.

RecoverAI – Revenue Recovery Workflow MVP *FastAPI, Streamlit, SQLite, Razorpay Test Mode*

- Built a four-endpoint prototype for failed-payment workflows with rules-based decisions, dashboard metrics, and administrator approval/rejection.
- Implemented HMAC SHA-256 webhook validation, idempotency checks, a stop switch, and audit logs across six SQLite tables; tested with Razorpay Test Mode.
- Stored transactions, webhook events, decisions, recovery attempts, settings, and audit entries separately; kept test flows free of real messages and charges.

NewMomCircle – Postpartum Mental Health App *React Native, Supabase, Java, MentalBERT*

- Worked on a multilingual mobile support workflow for postpartum users, connecting interface and data-service components.
- Explored MentalBERT and DistilBERT classification approaches and designed an SOS escalation flow for safety-sensitive cases.

EXPERIENCE AND LEADERSHIP

NetworkGeek – Data Scientist Intern *On-site / Nov–Dec 2025*

- Prepared, analyzed, and visualized data for machine-learning workflows during an on-site internship.
- Collaborated with the team and communicated technical findings in review discussions to inform next-step decisions.

Hackfinity Agentic AI Hackathon – Organizer and Team Lead *24-hour event*

- Coordinated event execution and team communication during a 24-hour Agentic AI hackathon.
- Supported participants and managed event flow under time constraints as an organizer, rather than a competing developer.

EDUCATION

Saveetha Institute of Medical and Technical Sciences (SIMATS), Chennai *2023–2027*

B.Tech, Computer Science Engineering (Artificial Intelligence) | GPA: 9.1/10.0

Coursework: Object-Oriented Analysis and Design; Cloud and Big Data; Internet Programming

CERTIFICATIONS AND ACHIEVEMENT

Oracle Academy: Java Foundations; Database Foundations (SQL and RDBMS), 2024

AGNITO University Awardee, SIMATS, 2024
